

VINOHRADNÍCKA OBLASŤ

Tokaj

SLOVAKIA

Slovak Tokaj has an area with sandstone bedrock. Tokaj is well-known for its highly diverse geology, yet largely volcanic countryside with lots of rhyolitic and andesitic tuff with the exception of the Tokaj Hill, which is covered with a thick layer of loess. However, present-day Slovak Tokaj is not located on the slopes of the Zemplén Hills, rather on the slopes of the so-called Zemplén Island Hills, where as well as the sandstone and some limestone, there are of course also some volcanic rocks.

Tokajské víno

from three main grapes varieties:

- Furmint
- Lipovina
- Muškát žltý (Yellow Muscat)

Slovak Tokaj wine styles:

- Tokajský Furmint
- Tokajská Lipovina
- Tokajský Muškát žltý
- Tokajské samorodné suché (suché means "dry")
- Tokajské samorodné sladké (sladké means "sweet")
- Tokajský výber (výber meaning "aszú")
- Tokajská výberová esencia (the Hungarian version is called aszú-eszencia)
- Tokajská esencia (meaning "essence")
- Tokajský mášláš (derived from the Hungarian word máslás)
- Tokajský fordítáš (derived from the Hungarian word fordítás)
